

EU RoHS Scope Statement

Caton Connector Corporation
26 Wapping Road, Kingston, Massachusetts 02364 USA

Effective Date: September 10, 2026

Caton Connector Corporation designs and manufactures high-voltage connectors, cable assemblies, and related interconnect products.

The products covered by this statement are designed and rated for use above the applicable voltage thresholds specified in Article 3(1) of Directive 2011/65/EU, as amended: 1,000 volts AC or 1,500 volts DC, as applicable.

Accordingly, based on their rated operating voltage and intended use, these products fall outside the definition of electrical and electronic equipment ("EEE") applicable to the RoHS Directive and are therefore outside its scope.

This determination is based on product operating ratings and intended use, not solely on dielectric-withstand, hi-pot, qualification, or other test voltages.

This statement addresses RoHS applicability only and is not a certification regarding the presence, absence, or concentration of restricted substances within individual components or materials. Caton does not independently verify or certify material-content compliance for products that fall outside the scope of the RoHS Directive.

This statement reflects Caton's current understanding of its products and applicable regulatory requirements as of the effective date.
